Library Witte Dame Eindhoven DDW12 20 October 10am-5pm

App concept: Hypochondriapp

A map of the city tells you where illness caused by infection is caused. Using features like;

- Browse through neighbourhoods to see the spread over geolocations
- Scroll through time to see the history and future of the spread
- Search for time; and location-based predictions

A clear interface working with a red layer-system.

Searchlight circle and gradient percentage express urgency.

hypochondriapp
Stay Well Soon

A few facts:

- Used information is based on calculated extrapolations of historic Open Data from the GGD (Health Authority)
- Infection spread is registered primarily by family doctors

Thus with the actual information at hand people can make better decisions.
